Challenge
With rapid growth and expansion to a number of subsidiaries and territories, Alsina’s organisation also grew in complexity of systems and processes, making day to day tasks time consuming for employees and exposing gaps in security.

Alsina identified that process innovation and product improvement would be their competitive advantage, therefore an investment in technology was key for the future development of their company.

Alsina were already working with an integrator on this transformation project but after an initial consultation, they were so impressed with the depth of experience and proven methodology that Logicalis brought to the table, Alsina entrusted our team with the entire transformation project and future goals.

“We knew that if we want to be competitive at the highest level, technology has to be our ally.”
Josep David Alsina, Managing Director, Alsina Formwork.

Solution
• Logicalis worked with Alsina to migrate their ERP from Private Cloud to Azure, adding a security and back up layer to deliver immediate productivity and security gains.

• We ensured their Azure environment was optimised and right sized, gaining cost savings immediately through reserved instances discount.

Outcome
• Moving to cloud, enabled operations to become more agile and also translated into cost benefits which they will invest in other projects in the future
• By removing complexity from their operations it enhanced the employee user experience internally
• Logicalis helped them migrate to Azure providing zero risk and minimal downtime
• Right sizing the project to deliver cost savings in the first month
• Alsina believe this project is industry leading and will deliver them a significant competitive advantage as well as cost savings and a simplified mode of operations.

Logicalis helped provide them a blueprint for change which has gained their trust to explore other innovative technologies.

Next Steps
The Next step is to migrate their on premises BI environment to Azure. Additionally, Logicalis is working in different areas, such as M365 security and backup, deploying new applications in Azure, monitoring and Cloud Managed Services.
