Architects of Change

Digital Fabric Platform

Gain a centralised, real-time view of your complete IT infrastructure health and recommendations for improvement.

The award-winning Digital Fabric Platform underpins our comprehensive portfolio of digital managed services across cloud, connectivity, security and digital workplace. Logicalis clients now have access to a simplified view of their IT ecosystem via a digital dashboard, which measures the health of their environment across five key scores.

The AIOps powered platform delivers process automation, industry benchmarking and data-driven insights for better business outcomes.

Benefits of the Digital Fabric Platform

Gain economies of scale in interoperability performance

When you break down what you need to transform your organisation, there's often overlap between priorities and it's hard to know where to begin. Our Digital Fabric Platform ties together your transformation initiatives efficiently, uncovering synergies and capturing savings as you go.

Get a real time view of your entire technology suite

Disparate systems don't build a solid foundation – they create gaps and inefficiencies. By bringing the layers of digital infrastructure together into a central Digital Fabric Platform, you can get a real time view that spans your technology suite, ensuring you stay on top of performance and ahead of surprises.

Harness actionable leadership benchmarks

Forget guesswork – through our Digital Fabric Platform Scoring system you can gain access to industry benchmarks across environment, economics and user experience, showing you exactly how your organisation measures up against the competition.

The Digital Fabric Scores

The Digital Fabric Platform simplifies your environment into five essential scores that, when combined, reflect the health of your contracted managed services and provide actionable recommendations to improve business outcomes.

Reliability

Our predictive analytics provides a reliable, consistent and productive end user operating environment.

Security Compliance

Swiftly assess protection against threats, ensure secure data, and verify systems are current, under warranty, and compliant.

Economic

Ensure optimal value and regain control of spending on technology platforms.

User Experience

Enhance user experience through continuous improvement in responsiveness, usability, and productivity.

Environment

Cut your carbon footprint by digitising and dematerialising IT solutions. Use environment data for sustainability insights and benchmarking against similar organisations.

Take the next step in IT excellence
