

Turn rapid digital change into competitive advantage

AI-ready networking, security and global lifecycle management

As a Global Cisco Preferred Partner, we do more than deliver technology—we harness the collective expertise across our worldwide operations, to turn infrastructure into measurable business outcomes. We modernise enterprise networks with a security-first approach, extend our customers' cybersecurity capacity through a global SOC footprint and manage the full IT lifecycle, from design to optimisation. With seamless global delivery and strategic advisory relationships, we help organisations operate securely while setting the foundation for future growth.

Navigating complexity for digital success

Organisations are racing to adopt generative AI, but most are still learning in real time and struggling to translate experimentation into measurable business value. As AI usage expands and gaps in skills, infrastructure readiness and visibility create friction, ungoverned use introduces new security and compliance risks. To break through, organisations are rethinking how they modernise, building more agile, scalable and secure foundations while partnering with managed service providers to accelerate outcomes in an increasingly AI-driven world.

82%

of CIOs describe their approach to AI as "learning as we go".

88%

of CIOs say a lack of internal technical capability is holding back their AI ambitions.

94%

Of organisations expect to use Managed Service Providers.

Source: "[Logicalis Global CIO Report 2026](#)."

- More than 130 Cisco Certified Internetwork Experts (CCIEs), a massive bench of CCIE-level engineers, which is the most prestigious and difficult technical certification offered by Cisco
- Global Enterprise Networking and Meraki Partner of the Year (2023 and 2022)
- Cisco Powered Service (CPS): Managed Cisco SD-WAN and Meraki SD-WAN, Managed Campus Access and Meraki Security

Unifying global operations for maximum ROI

By combining deep portfolio expertise across Cisco security, cloud and networking with a proactive lifecycle approach, we serve as a single accountable partner dedicated to maximising the value of your Cisco investments. Our global support structure, spanning planning, adoption and ongoing optimisation, removes the administrative burden from IT teams and ensures clear escalation paths for accelerated resolutions.

Network modernisation for future readiness

De-risk modernisation and build a resilient, observable foundation for global scale and AI-driven growth

Through our Intelligent Connectivity approach, Logicalis designs and deploys advanced Cisco architectures, from SD-WAN and SASE to private 5G, that ensure network readiness for the high-bandwidth, low-latency demands of next-generation workloads. Logicalis ensures investments deliver measurable business outcomes, maximum uptime and infrastructure agility, and eliminate waste by aligning licencing with real-world usage.

- Achieve infrastructure readiness, preparing your environment with Cisco's latest high-density switching and AI Ops-powered automation, to support massive data workloads before they scale
- Achieve new levels of visibility and turn "invisible" network performance into tangible business intelligence

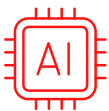

Redefining managed security

Security-first infrastructure and proactive threat hunting

84% of CIOs surveyed in the 2026 Logicalis CIO report cite regulatory and compliance concerns as major barriers to AI adoption. And 35% believe AI has reduced their organisations' ability to effectively detect breaches and cyberattacks. With new threats on the rise, organisations need to improve security coverage with tailored solutions that fit their specific business needs. Logicalis extends internal teams with a Cisco-validated global SOC, offering automated response and MXDR services to manage complex, multi-vector threats.

- First Cisco Partner worldwide to launch Cisco's Extended Detection and Response (XDR) as a managed service, validating our ability to manage complex, multi-vector threat hunting using Cisco's most advanced security AI and telemetry
- Cisco Powered Service (CPS) designations: Managed Firewall, Security Service Edge (SSE), Managed SASE (Secure Access Service Edge)
- Able to globally deliver a managed SASE service (integrating SD-WAN with Cisco Umbrella security)

Real business outcomes

Infrastructure readiness for AI

Maximum return on Cisco investment

Reduced operational complexity

Zero-trust security by design

Guaranteed global consistency
